

# Data Analysis of Field Experiments in Agriculture with R

I wrote a series of lectures about analyzing data from agricultural experiments with Minitab long time ago. Since then I learned using SAS and R to analyzing experimental data. In order to share my experiences in data management and analysis in the three software environments I started to put together data analysis, experimental design, and advanced data analysis in SAS, Minitab and R. Since the original series of lectures were written in Chinese, I will put all thing in Chinese first and then in English.
