

Several important and useful iPhone/iOS settings

1. Open iPhone with TouchID directly without having to press the Home button again.

[**Turn ON**] setting-general-accessibility-home button -resetfinger to open

2. Speed up iPhone by reducing motion of the user interface, including the parallax effect of icons

[**Turn ON**] setting-general-accessibility-reduce motion

3. Clear the list of apps that stay in background and refresh frequently without your notice. The intention of automatic background app refresh is to refresh their content when on WLAN or cellular in the background and accelerate serving the content to you. However, the function consumes cellular data and and battery power. To reduce cellular data usage and preserve battery life, turn off all apps that do not need frequently refresh their contents at the background.
